

Logistics and Supply Chain Management

26FS

Programme	BSc in Business Information Technology
Degree	Bachelor
ECTS	5
Module type	mandatory module
Module coordinator	Dr. John Paul Manning
Compulsory attendance	Attendance is expected, especially for group work.
Leading principle / Short description	Co-creating value in networks is key to 21st century business success. Companies expect business information technology students to be aware of this, and that they are equipped with the right toolbox to create value in a customer-centric, networked and sustainable way. As a student, you must understand the workings of these success factors and their interplay with business information technology. That means understanding how connectivity and physical and digital value creation can be combined, and where innovation potential arises in this development: economically, ecologically, and socially. In this module, you will learn about the basic terms, concepts, methods and tools of Supply Chain Management & Logistics that will help you shape the networked economy of the 21st century in a sustainable way.
Module content	- o The fundamental terms, definitions and concepts of Supply Chain Management & Logistics - o The partial functions and actors of Supply Chain Management & Logistics and their value contribution to the fulfilment of customer needs (purchasing, production, warehousing, distribution, transport). Key aspects of Supply Chain Design and Management (customer and supplier relationship management, management of value networks and ecosystems, collaborative innovation and supply chain analytics) - o The flows of goods, information, documents, values as well as financial flows and legal issues in Supply Chain Management & Logistics - o The functioning and the success factors of digitally networked value creation. The role of technology and infrastructure in digitally networked value creation. Methods and tools for measuring and achieving ecological, economic and social goals in networked value creation.

Competencies to be achieved**Knowledge and Understanding: Students ...**

- o understand the basic concepts, methods and instruments of crosscompany value creation through Supply Chain Management.
- o understand how to win customers faster and keep them longer in a digital future with ever more specialized offers.
- o understand the challenges that companies face in a digitally and physically networked world.
- o understand the changes triggered by global and digital connectivity and networks. understand the importance and aspects of sustainability in globally networked value creation.
- o know the fundamentals, prerequisites and functioning of networked value cocreation.
- o understand the importance of digital and physical infrastructure and technologies in the context of networked valuecreation.
- o understand the effects of their own actions in a networked world.

Applying Knowledge and Understanding: Students ...

- o can understand and accurately describe value creation in networks using appropriate methods (Obj. 1.1).
- o can explain fundamental methods and instruments of Supply Chain Management & Logistics and apply them to case studies (Obj. 1.1).
- o can apply methods in case studies to measure the profitability and efficiency in the context of Supply Chain Management & Logistics (Obj. 2.1).

Making Judgements: Students ...

- o can assess innovation potentials associated with Supply Chain Management & Logistics technology.
- o can assess crosscompany value creation in terms of economy, ecology and society.
- o can assess the impact of networked value creation on companies, society and the environment.

Communications Skills: Students ...

- o use correct technical vocabulary for written and oral communication.
- o are aware of the particularities of crosscompany and (partially) automated collaboration in networks.

Learning Skills: Students ...

- o acquire terms, definitions, methods, and instruments in guided selfstudy. deepen their professional skills independently by searching for, finding and using appropriate specialist literature.

Prerequisites

Module Introduction to Business Information Technology
Module Business Processes Management
Module Project Management

Teaching and learning methods

Contact Hours:
Lecture, Interactive instruction, Seminar, Discussion, Presentation, Assignment, Group work, Case study, Simulation
Guided Self-Study:
Individual work, Working with a partner, Group work, Online Tutorial, Review of literature

Literature

Required Reading:
Mallach, E. G. (2015). Information systems: what every business student needs to know. Boca Raton (FL): CRC Press.
Poluha, R.G. (2016). The Quintessence of Supply Chain Management - What You Really Need to Know to Manage Your Processes in Procurement, Manufacturing, Warehousing and Logistics. Berlin, Heidelberg: Springer Berlin Heidelberg.
Further readings as per Moodle.
Recommended Reading:
Key readings are available via Moodle.

**Grading
Assessment**

Grade 1-6 (half grades)

Exam 100%

Oral / Written	Written
Duration (min)	90
Timeframe	Examination period (end of semester)
Grading Scale	Points
Remarks	0 - 90 points The exam is administered via Moodle using an iPad.

Learning points 0%

Grading Scale	points
Remarks	During the semester, individual and group-based tests / exercises / work assignments may be given, with which a maximum of 10% learning points can be earned. These learning points can be credited to the total number of points of the final module examination. For details see the documentation / Moodle.

Module details**Logistics and Supply Chain Management (BITFT 2a) - Thu - Basel**

Time	8:15 AM - 12:00 PM
Language	Englisch
Max. participants	64
Periodicity	Weekly
Lecturers	Dr. John Paul Manning
Number	2-26FS.W-B-BITFT-040205S1.SN/FT24
